SUMMARY

Experienced .NET Full Stack Developer with 4 years of experience designing, developing and delivering scalable, production-grade enterprise applications. Expert in ASP.NET Core 8, C#, Web API, SignalR, and Angular with strong command of database management (MSSQL, PostgreSQL). Demonstrated ability to design real-time monitoring systems, integrate live streaming pipelines, and drive end-to-end software development in Agile environments.

TECHNICAL SKILLS

Programming Languages: C#, JavaScript, TypeScript, SQL

Backend Frameworks: ASP.NET Core 8, ASP.NET MVC, Web API, .NET Framework, SignalR, Background Services, Windows Services, RESTful APIs

Frontend Technologies: Angular, AngularJS, JavaScript, Bootstrap, Chart.js, Leaflet.js, Responsive Web Design

Databases & ORM: PostgreSQL, Microsoft SQL Server (MSSQL), ADO.NET, Entity Framework, LINQ, Stored Procedures, Query Optimisation

Architecture & Patterns: MVC, Microservices, RESTful APIs, Event-Driven Architecture, Dependency Injection, SOLID Principles, Design Patterns, JWT Authentication, Background Services, Real-Time Data Processing

DevOps & Tools: Git, GitHub, SVN, Nginx, IIS, Postman, Visual Studio, VS Code, Agile, Scrum, CI/CD Pipelines

EXPERIENCE

Arya Omnitalk Wireless Solutions, Pune

June 2022 – Present

Assistant Manager – Software Development

Central ANPR Monitoring Dashboard:

- Designed and deployed a SignalR-powered real-time centralised dashboard using ASP.NET Core 8 and PostgreSQL to monitor all lane ANPR devices, background service health, camera feeds, and data-sync operations across multi-lane highway deployments.
- Implemented push-based live UI updates via SignalR eliminating polling overhead, ensuring sub-second state refresh; built PostgreSQL-backed status aggregation layer supporting live monitoring and historical downtime trend analysis.
- Achieved 99.8% system uptime and 85% reduction in false positives through confidence-scoring algorithms and structured manual review workflows across high-volume licence plate recognition operations.

Consolidated Site Data Summary – Integration Tracking Tool:

- Developed internal monitoring platform using .NET Core and PostgreSQL to track real-time device installation and integration progress across multiple highway sites, replacing ad-hoc communication with a centralised live dashboard.
- Built automated status aggregation service and introduced root-cause tagging for delayed deployments, improving on-time delivery rates across distributed highway infrastructure projects.

NEXGEN – Highway Device Management Platform:

- Architected integrated device management platform consolidating cameras, VMS, ATCC, ECB, and MET sensors into a unified ASP.NET MVC control room interface with live RTSP streaming and interactive Leaflet.js mapping.
- Engineered device-specific background services per device type enabling real-time data collection, isolated fault handling, and independent scaling, reducing manual device monitoring effort by 80%.

- Built automated health-monitoring service generating proactive alerts across 5 device categories (cameras, VMS, ATCC, ECB, MET sensors).

Smart Highway Road User Assistance & Weather Intelligence System:

- Built real-time traveler assistance portal delivering live road alerts (accidents, closures, diversions, congestion) and route-based weather data via Open-Meteo API integration using ASP.NET Core and SignalR.
- Engineered RTSP-to-HLS/MSE streaming pipeline via a dedicated streaming server for seamless cross-browser and iOS camera feed access; implemented SignalR-based roadside device status monitoring.
- Developed admin-gated user alert submission workflow and proximity-based utility locator (hospitals, petrol pumps, police stations, emergency services) along the user route.

Cash Deposit System (CDS) – Toll Plaza Cash Management:

- Optimised Microsoft SQL Server stored procedures and executed query performance tuning for high-frequency cash reconciliation workflows, improving daily report generation time by ~40% across multiple toll plaza locations.
- Delivered zero-regression feature enhancements to cash flow tracking and RDLC report generation, ensuring full backward compatibility and data integrity across multi-location toll operations.
- Built AngularJS frontend with ASP.NET MVC backend supporting real-time transaction tracking and daily reconciliation reporting across distributed toll infrastructure.

CERTIFICATIONS

- Foundational C# with Microsoft
- Relational Database
- Responsive Web Design

EDUCATION

Post Graduate Diploma in Advanced Computing (PGDAC) – CDAC – IET, Pune *2021 – 2022*

Percentage: 72.33%

Bachelor of Engineering (Mechanical Engineering) – JSPM NTC, Pune *2017 – 2020*

CGPA: 7.59 / 10
